- 26: Projected incident movement/spread 12, 24, 48, and 72 hour time frames:
- 12 hours: Fire activity is limited to the northwestern area of the fire and it will continue to smolder, with flanking and increased fire progression along the uncontrolled fire edge in the refuge wilderness wetlands.
- 24 hours: Progression of the uncontrolled fire line will increase inside the refuge wilderness wetlands with stronger East Northeast winds. Light rains, over the past 24-hours, will decrease the threat to the control lines in Division Y and Z, but fire will continue spreading until significant rainfall occurs.
- 48 hours: Progression of the uncontrolled fire line will increase inside the refuge wilderness wetlands with stronger East Northeast winds. Light to heavy rains will continue over the next 24-hours that will decrease the threat to the control lines in Division Y and Z, but fire will continue spreading until significant rainfall occurs.
- 72 hours: **Same as above**
- 27: Values at Risk: include communities, critical infrastructure, natural and cultural resources in 12, 24, 48 and 72 hour time frames:
- 12 hours: High value commercial timberlands, the Okefenokee National Wildlife Refuge (OKR) and cultural resources, CSX railroads, and Suwanee Chapel Community.
- 24 hours: **Same as above**
- 48 hours: **Same as above**
- 72 hours: **Same as above**
- 28: Critical Resource Needs (amount, type, kind and number of operational periods () in priority order in 12, 24, 48, and 72 hour time frames):
- 12 hours: **none**24 hours: **none**48 hours: **none**72 hours: **none**

ICS-209 Form Page 2 of 3

29: Major problems and concerns (control problems, social/political/economic concerns or impacts, etc.) Relate critical resources needs identified above to the Incident Action Plan.

Moderate to heavy fuel loads in the swamp and uplands; limited accessibility for ground equipment; mulitiple jurisdictions involved; wilderness area; and reburn potential over the entire fire area. Needle cast and re-sprouted palmetto reburn are concerns. Timber logging activity within the burned area. Bear season, archery season and muzzleloader hunting is open increasing hunter activity in the area. Extended drought makes breakouts possible in the western portion of the fire.

30: Observed Weather for Current

Operational Period

Peak Gusts (mph): 18 Max.

Temperature: 75

Wind Direction: **E** Min. Relative Humidity: **75**

31: Fuels/Materials Involved: 7 Southern Rough

Heavy swamp fuel loads, heavy to moderate palmetto/gallberry, 3+ year rough

32: Today's observed fire behavior (leave blank for non-fire events):

Honey Prairie fire continues to creep and smolder on the west side of the Refuge.

33: Significant events today (closures, evacuations, significant progress made, etc.):

Crews continue to mop up, patrol for new starts, and monitor for heat on the west side of the Refuge.

34: Forecasted Weather for next Operational Period

Wind Speed (mph): **20** Temperature: **75**

Wind Direction: **NE** Relative Humidity: **70**

35: Estimated Control Date and Time:

36: Projected Final Size:

37: Estimated Final Cost:

38: Actions planned for next operational period:

Continue to patrol for new starts and monitor the west side of the Refuge for heat. Continue to mop-up containment lines and maintain readiness for breakouts.

- 39: For fire incidents, describe resistance to control in terms of:
- 1. Growth Potential Medium
- 2. Difficulty of Terrain High
- 40: Given the current constraints, when will the chosen management strategy succeed?
- 41: Projected demobilization start date:
- 42: Remarks:

Agency Administrator's objectives remain to contain all fires within the Okefenokee NWR, using indirect tactics at the swamp's edge because of inaccessible terrain, and to maintain wilderness values and reduce negative impacts to the ecosystem. Weather forecasts for Monday will exceed the threshold of 4 of the 5 indicators of increased fire behavior.
